

RTI Resin Rental Program: Fast, Reliable Solutions When You Need Them Most

Unexpected issues with ion exchange systems can lead to costly downtime and production delays. Whether it's a sudden resin failure, contamination, or delays in new resin deliveries, industrial water plants need a quick, reliable solution to stay operational.

That's where **Recirculation Technologies, LLC (RTI)** comes in.

Our **Resin Rental Program** is designed to provide immediate, short- or long-term support to facilities facing resin-related emergencies—**bridging the gap between failure and full system recovery**.

Why Choose Resin Rental?

In today's industrial landscape, lead times for new ion exchange resin deliveries are longer than ever. Emergency water trailers, once a common backup option, are now limited or unavailable due to high demand.

If your plant experiences a sudden loss of performance in its **cation or anion beds**, waiting several weeks for new resin can impact everything—from product quality and compliance to production schedules and maintenance budgets.

RTI's Resin Rental Program gives you:

- **Fast access to high-quality resin**
- **Flexible rental terms** (short or long-term)
- **Minimized downtime** during emergencies or outages
- **A cost-effective alternative** to emergency mobile trailers

Resin Types Available for Rent

RTI maintains a **strategic inventory** of industrial-grade ion exchange resins to meet the immediate needs of our customers. All rental resins are lab-tested and verified for performance prior to shipment.

Available Resin Types:

- **Strong Acid Cation (SAC)** – for softening and demineralization
- **Weak Acid Cation (WAC)** – ideal for removing alkalinity and hardness
- **Strong Base Anion (SBA)** – for silica and chloride removal
- **Weak Base Anion (WBA)** – for organic and acid scavenging applications

Whether your system is a conventional dual-bed, mixed-bed, or dealkalizer, RTI can provide the right chemistry to keep your operation running.

Optional Resin Installation Services

Need help placing the rental resin into your system?

RTI offers **professional resin installation services**, performed by trained technicians with decades of experience in ion exchange system setup and maintenance. Our crews will:

- Remove spent or fouled resin
- Clean and inspect vessels if needed
- Safely and efficiently load rental resin
- Verify proper layering and distribution
- Conduct start-up checks and flow calibration

Installation services are available with short notice and can often be scheduled within days of your request.

Who Should Consider Resin Rental?

RTI's Resin Rental Program is ideal for:

- Facilities with **unexpected resin failure**
 - Plants awaiting delayed **resin shipments**
 - Water systems that experience **cross-contamination**
 - Customers **trialing a new resin** without long-term commitment
 - Facilities performing **scheduled maintenance or retrofits**
-

The RTI Advantage

When you choose RTI for resin rental, you get more than just a product—you get a partner in system reliability and plant performance.

Program Benefits:

- Rapid response and nationwide availability
- Full lab support and resin compatibility review
- Pre-tested, high-quality resin ready for use
- Optional removal and reinstallation of resin
- No long-term commitments required

Ready When You Need Us

Don't let resin failure shut down your plant. With RTI's Resin Rental Program, you'll have a fast, flexible, and field-tested solution at your fingertips.
